## Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application.

## Listing of Claims:

Caucel claims 1-4.

5. (currently amended) The queuing system recited in claim 4 A queuing system comprising:

a plurality of interconnected directors, each one of the directors having:

an input/output interface section for receiving information from a source
thereof and for returning information to interface to such source; and.

a microprocessor for processing information sent thereto from a remote one of the directors, each one of the microprocessors having a CPU and a CPU memory, such CPU memory storing a queue for inbound information passed to such director for processing therein such information being sent to the remote director from an originating one of the directors; and

wherein each one of the input/output sections includes a queue for outbound information being returned to the source through such originating one of the directors after being processed by the microprocessor of such remote one of the directors:

wherein each one of the directors includes a translation table, such table storing at a location thereof corresponding to each one of the remote directors a producer index for the queue of such remote director and a consumer index for such one of the remote directors; and;

wherein the location for the table is a function that takes some part of the receiving information in the queue entry and derives the location into the table therefrom.
